JAVA PRACTICE PROGRAM

1.Driving Licence Eligibility:

```
import java.util.Scanner;
public class Licence {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        System.out.print("Enter your age: ");
        int age = sc.nextInt();
          String Eligible = (age >= 18) ? "You are eligible for a driving
licence." : "You are not eligible for a driving licence.";
        System.out.println(Eligible);
        sc.close();
    }
}
```

2.Even Number and Range Checker:

```
import java.util.Scanner;
public class Evencheck {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        System.out.print("Enter a number: ");
        int number = sc.nextInt();
        if (number % 2 == 0 && number > 10) {
```

```
            System.out.println(" The given number is even and greater
than 10.");
        }
        else {
            System.out.println(" The given number is not greater than
10 or not even.");
        sc.close();
    }
}
}
```

3.Student Pass Checker:

```
import java.util.Scanner;
public class passcheck {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        System.out.print("Enter a Mark: ");
        int Mark = sc.nextInt();
        System.out.print("Enter your attendance: ");
        int att = sc.nextInt();
        String student = (Mark >= 40 && att >= 75) ? "You have
passed the exam." : "You have not passed the exam.";
        System.out.println(student);
        sc.close();

    }
}
```

4.Shopping Discount Eligibility:

```
import java.util.Scanner;
public class Discount {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        System.out.print("Enter the purchase amount: ");
        int amt = sc.nextInt();
        System.out.print("Enter your membership status ");
        String status = sc.next();
        if (amt >= 2000 && status.equals("premium")) {
            System.out.println("You are eligible for a discount.");
        }
        else {
            System.out.println("You are not eligible for a discount.");
        }

        sc.close();

    }

}
```

5.Password Length Validator:

```
import java.util.Scanner;
public class passwordvalid {
    public static void main(String[] args) {
```

```
        Scanner sc = new Scanner(System.in);
        System.out.print("Enter a password: ");
        String password = sc.next();
        System.out.print("Is the account valid? (true/false): ");
        boolean valid = sc.nextBoolean();
        String result = (password.length() >= 8 && valid) ? "The
password is valid." : "The password is not valid.";
        System.out.println(result);
        sc.close();
    }
}
```

6.ATM Withdrawal Validation:

```
import java.util.Scanner;

public class withdrawlvalid {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        System.out.print("Enter account balance: ");
        int balance = sc.nextInt();

        System.out.print("Enter withdrawal amount: ");
        int amount = sc.nextInt();

        if (amount > 0 && amount % 100 == 0 && amount <= balance)
{
            balance = balance - amount;
```

```
            System.out.println("Transaction successful.");
            System.out.println("Remaining balance: " + balance);
        } else {
            System.out.println("Transaction failed.");
            System.out.println("Invalid withdrawal amount.");
        }

        sc.close();
    }
}
```

7.Login Attempt Controller:

```
import java.util.Scanner;

public class Loginattempt {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        System.out.print("Enter maximum attempts: ");
        int max = sc.nextInt();

        System.out.print("Enter current failed attempts: ");
        int failed = sc.nextInt();

        if (failed < max) {
            System.out.println("Login attempt is allowed.");
```

```
            System.out.print("Did login fail? (true/false): ");
            boolean loginFailed = sc.nextBoolean();

            if (loginFailed) {
                failed++;
                System.out.println("Login failed.");
            }
        }

        if (failed >= max) {
            System.out.println("Account is locked.");
        } else {
            System.out.println("Next attempt is allowed.");
        }

        sc.close();
    }
}
```

8.Smart Battery Charging:

```
import java.util.Scanner;

public class BatteryCharging {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
```

```
        System.out.print("Enter battery percentage: ");
        int battery = sc.nextInt();

        System.out.print("Enter temperature: ");
        int temperature = sc.nextInt();

        boolean allowed = battery < 90 && temperature >= 10 &&
temperature <= 45;

        String status = allowed ? "Charging allowed" : "Charging not
allowed";

        if (allowed) {
            battery = battery + 5;
        }

        System.out.println(status);
        System.out.println("Battery level: " + battery + "%");

        sc.close();
    }
}
```

9.Online Order Free Delivery:

```
import java.util.Scanner;
public class onlineorder {
```

```
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        System.out.print("Enter the purchase amount: ");
        int amt = sc.nextInt();
        System.out.print("Enter your membership status ");
        String status = sc.next();
        if (amt >= 2000 || status.equals("premium")) {
            System.out.println("Free delivery is available.");
        }
        else {
            amt = amt + 50;
            System.out.println("Free delivery is not available.");
        }
        System.out.println("Total amount to be paid: " + amt);

        sc.close();

    }
}
```

10.Inventory Reorder Checker:

```
import java.util.Scanner;

public class Reordercheck {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        System.out.print("Enter current stock: ");
```

```
        int stock = sc.nextInt();

        System.out.print("Enter minimum stock level: ");
        int minimum = sc.nextInt();

        System.out.print("Enter incoming stock: ");
        int incoming = sc.nextInt();

        stock += incoming;

        String result = (stock < minimum) ? "Reorder Required" :
"Stock Sufficient";

        System.out.println("Updated stock: " + stock);
        System.out.println(result);

        sc.close();
    }
}
```
